Polypropylene Strapping

Perfect for bundling, packaging, sealing and securing your products, boxes etc.

PRODUCTS SHEET

Polypropylene Strapping is the most commonly used and least expensive of all strapping materials. It's perfect for bundling together lighter products into packs making it easier to store, move and ship products. These strapping products are -

Easy to Apply: Strapping can be applied manually using strapping tools or with the use of a strapping machine for a fast and efficient process.

Light Weight: It is very light and flexible, making it ideal for sealing, reinforcing and securing lighter loads.

High Performance & Reliable: It does not deform or corrode. It resists bumps and scrapes making it ideal for use on pallets that will be stored for long periods of time or shipped long distances.

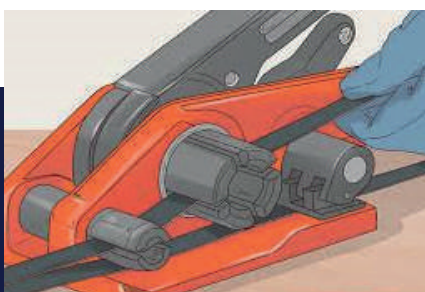

After a cardboard box has been sealed with tape, even if it is a sturdy cardboard box, strapping can be applied to secure it fully.

It wraps all the way around the parcel, and the join is bonded together to provide a tight, strong seal that can't easily be broken.

Polypropylene Strapping is also:

- Very economical.
- Good for light to medium duties.
- Flexible and non-rusting.

On the overleaf there is just a small selection of our Polypropylene Strapping products. We offer many more products within this range. If you have a requirement you would like to discuss please contact your Area Sales Manager or nearest branch.

Portable Strapping Machine.

Polypropylene strapping use for packing

A securely strapped shipping carton.
